

In regards to allowing XM to broadcast traffic and weather, I believe it should most definatley be allowed. The obvious comparison is that between OTA television, cable television and satelittle television. I have satellite television for the same reseasons I have XM satelllite radio: the quality is better and the selection is better. Local radio broadcasting does not offer either or those things.

The worst part about stopping XM from offering traffic and weather, or just about anything a local broadcaster could provide, is that I PAY FOR IT. There is a reason I pay to listen to XM versus listening to local broadcasters, and that very large difference should allow XM to do as they please in my opinion.
